

ShorePort Supplemental Float

Instructions

Part #: 1022993

Failure to follow instructions may result in personal injury and may invalidate the applicable warranty.

Step 1. Determine how many floats you may need. Each float adds 50 lbs to the capacity of the ShorePort.

Step 2. Determine if you want the floats in the forward slot, middle slot, or rear slot. Placing floats in the rear may help keep the jet ski on the ShorePort but may also make it more difficult to load.

Step 3. Insert the floats into the bottom of the ShorePort with the small end of the taper going into the Shoreport as shown.
